Pipeline

Land (Gaia)

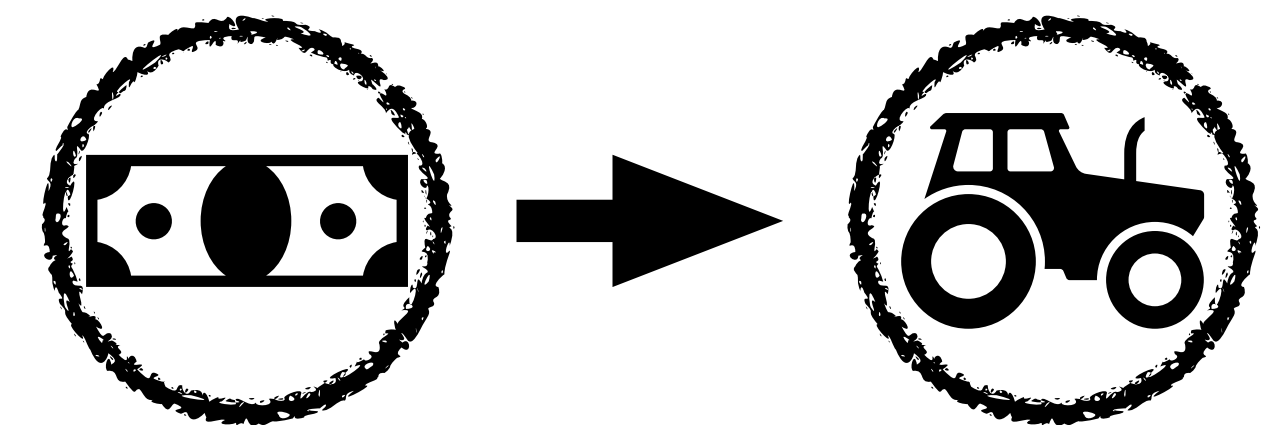

- Tier 0 Source (L) / Tier 0 Game:
- Can be bought with Money (Price: L_p)
- Introduced into Energy - Work relation
- Carrying Capacity in Energy - Work relation
- Initial: $L = L_B + G_p$
- L_B : Bought Land — G_p : Gaia Point
- Initial $L_B = 0$ — Initial $G_p = 0$

$$L_p = c_L 2^L$$

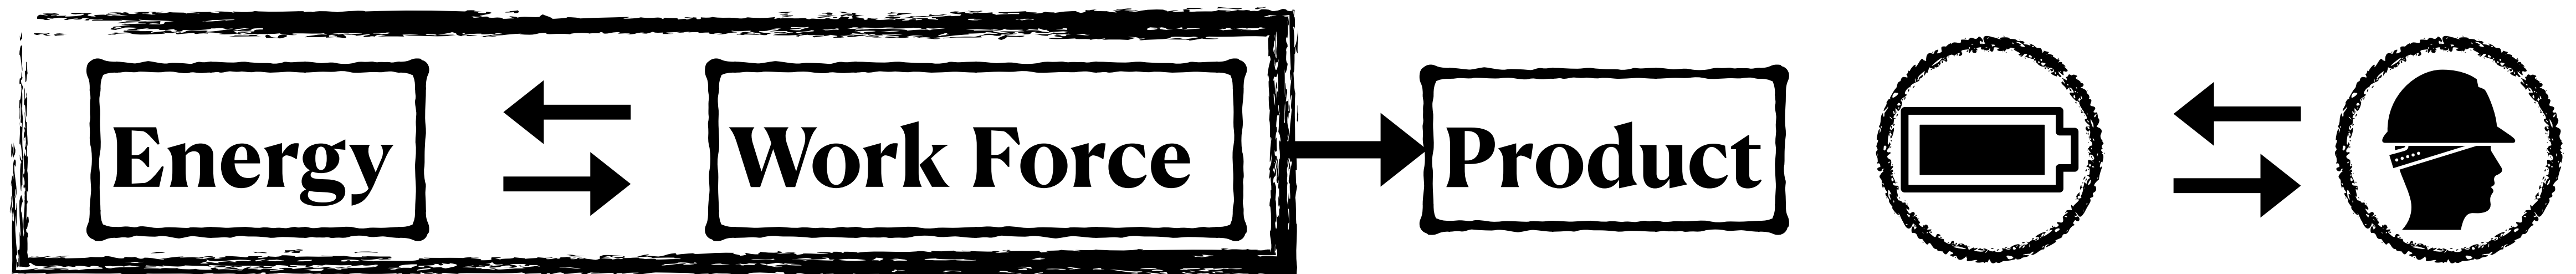

$$c_L = \frac{c}{1 + \text{NumberOfClicks}}$$

- G_p can be bought with Real Money up to 3 after having at least 10 Land
- G_p : Gaia Points can be turned off to use them later in the game
- To prevent *Pay to Win* > Price of Land increases with Gaia Points
- Constant c will be determined after simulations of MARKET

- Click to decrease price of Land and earn Money:

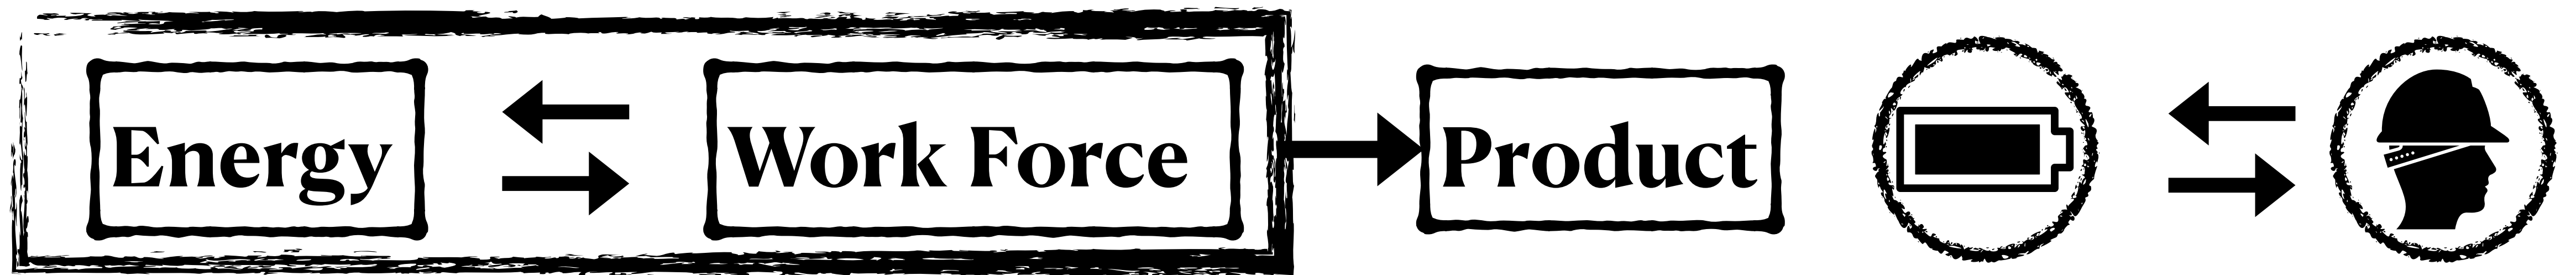

$$1 \text{ Click} = \text{Game Tier} \times (1 + \log_{10}(L_p)) \$$$

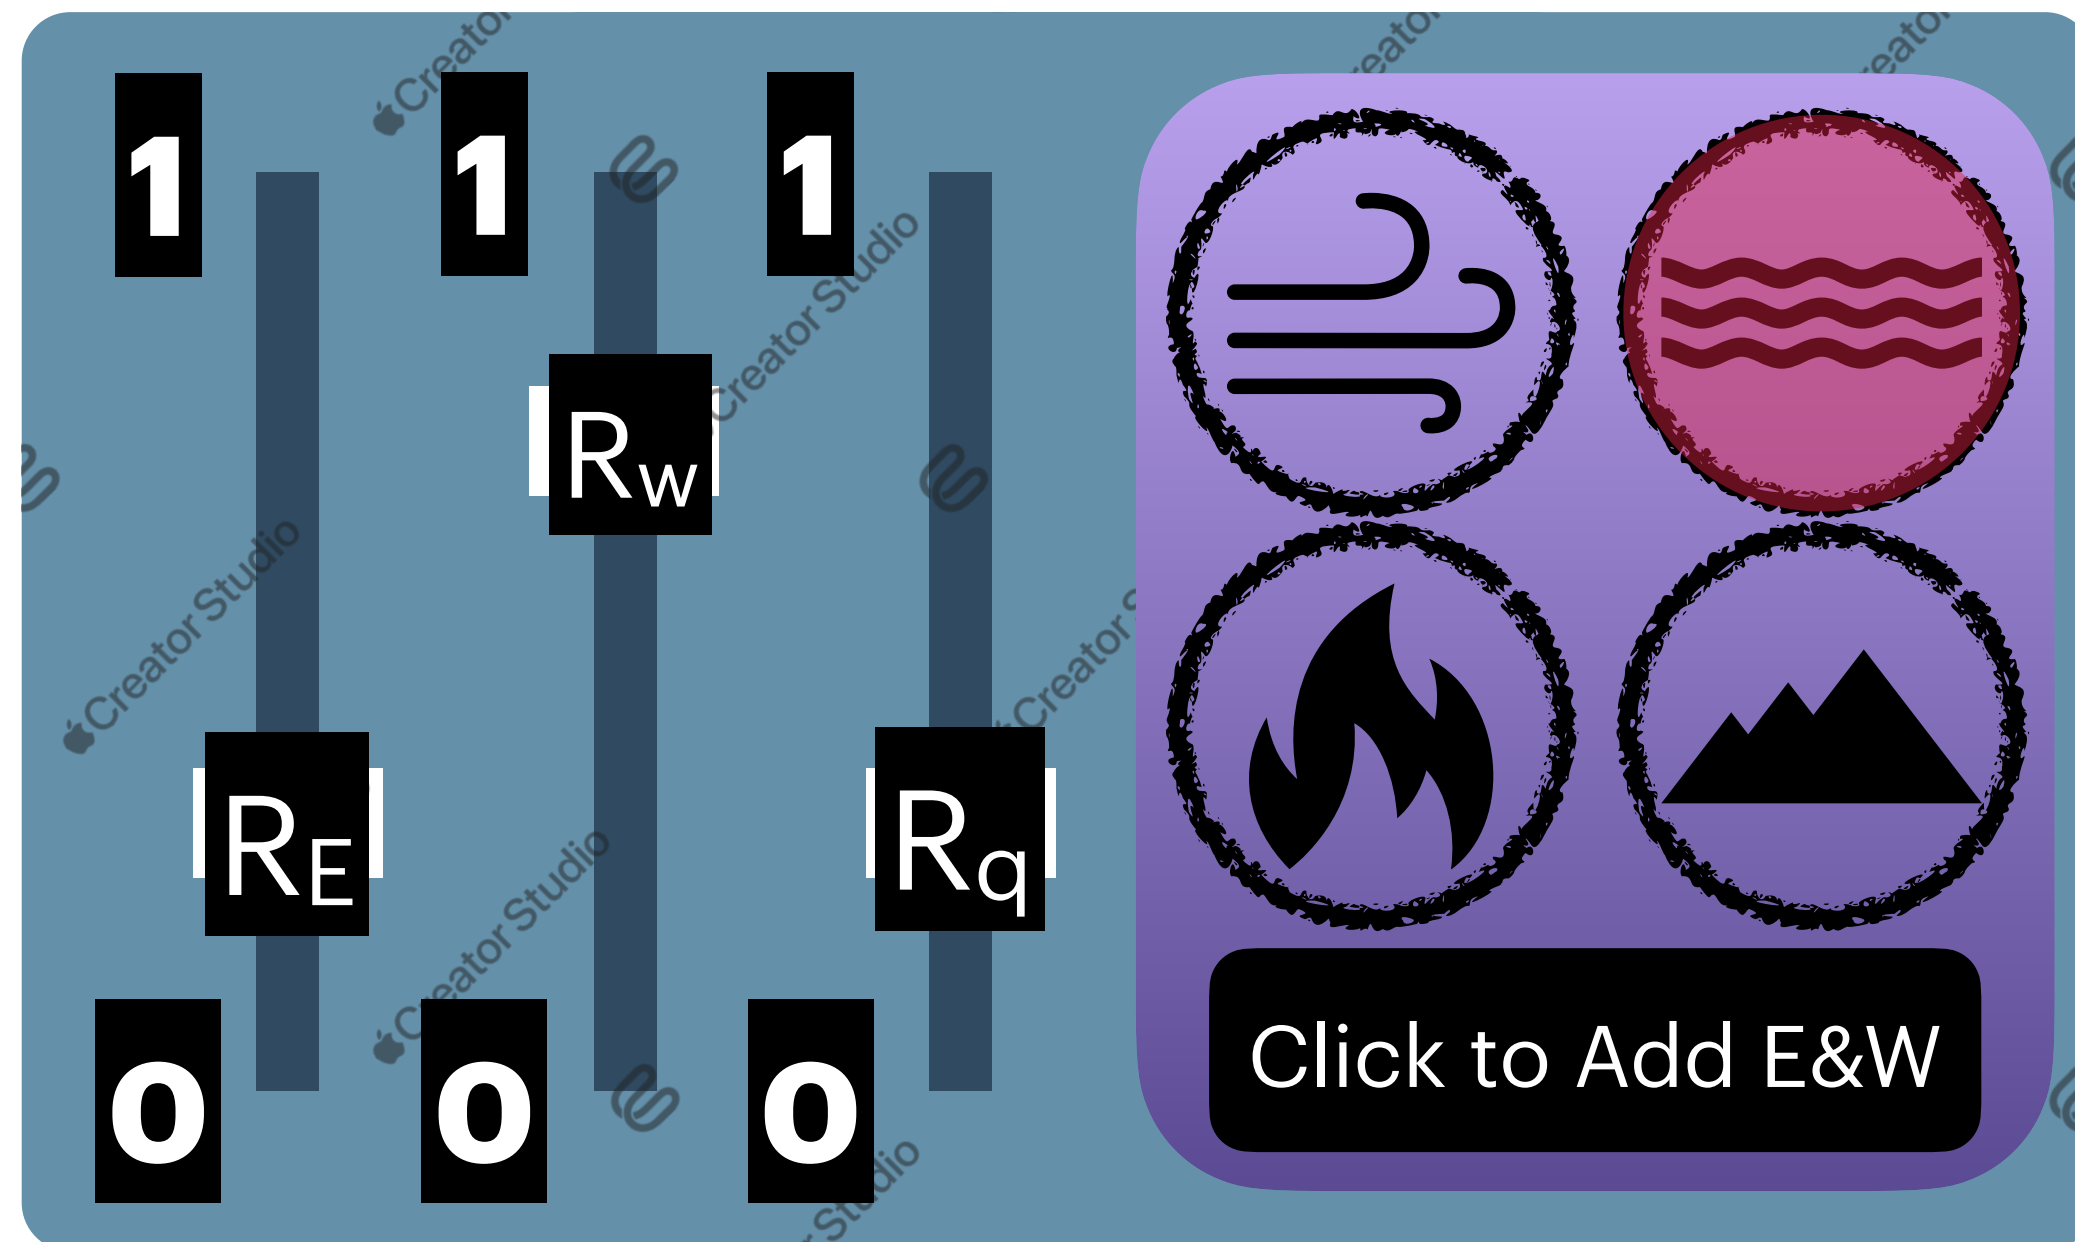

- Tier 1 Game (Graph—Slider)
- Prey (Energy: E) — Predator (Work Force: W) relation
- Opens after 10 Lands
- Carrying Capacity is the Land: L
- R_E : Percentage of Land for Energy
- R_w : Work Force Health Rate
- R_q : Energy Quality Rate
- Science Points $S = 1$ at the start
- Constant n is boolean:
 - Adds Energy and Work Force with each click
 - Restarts chaotic system when everything become extinct

$$\frac{dE}{dt} = \frac{R_w}{R_q} SE \left(1 - \frac{E}{L}\right) - EW + nR_E L$$

$$\frac{dW}{dt} = SEW - \frac{R_w}{R_q} W + n(1 - R_E)L$$

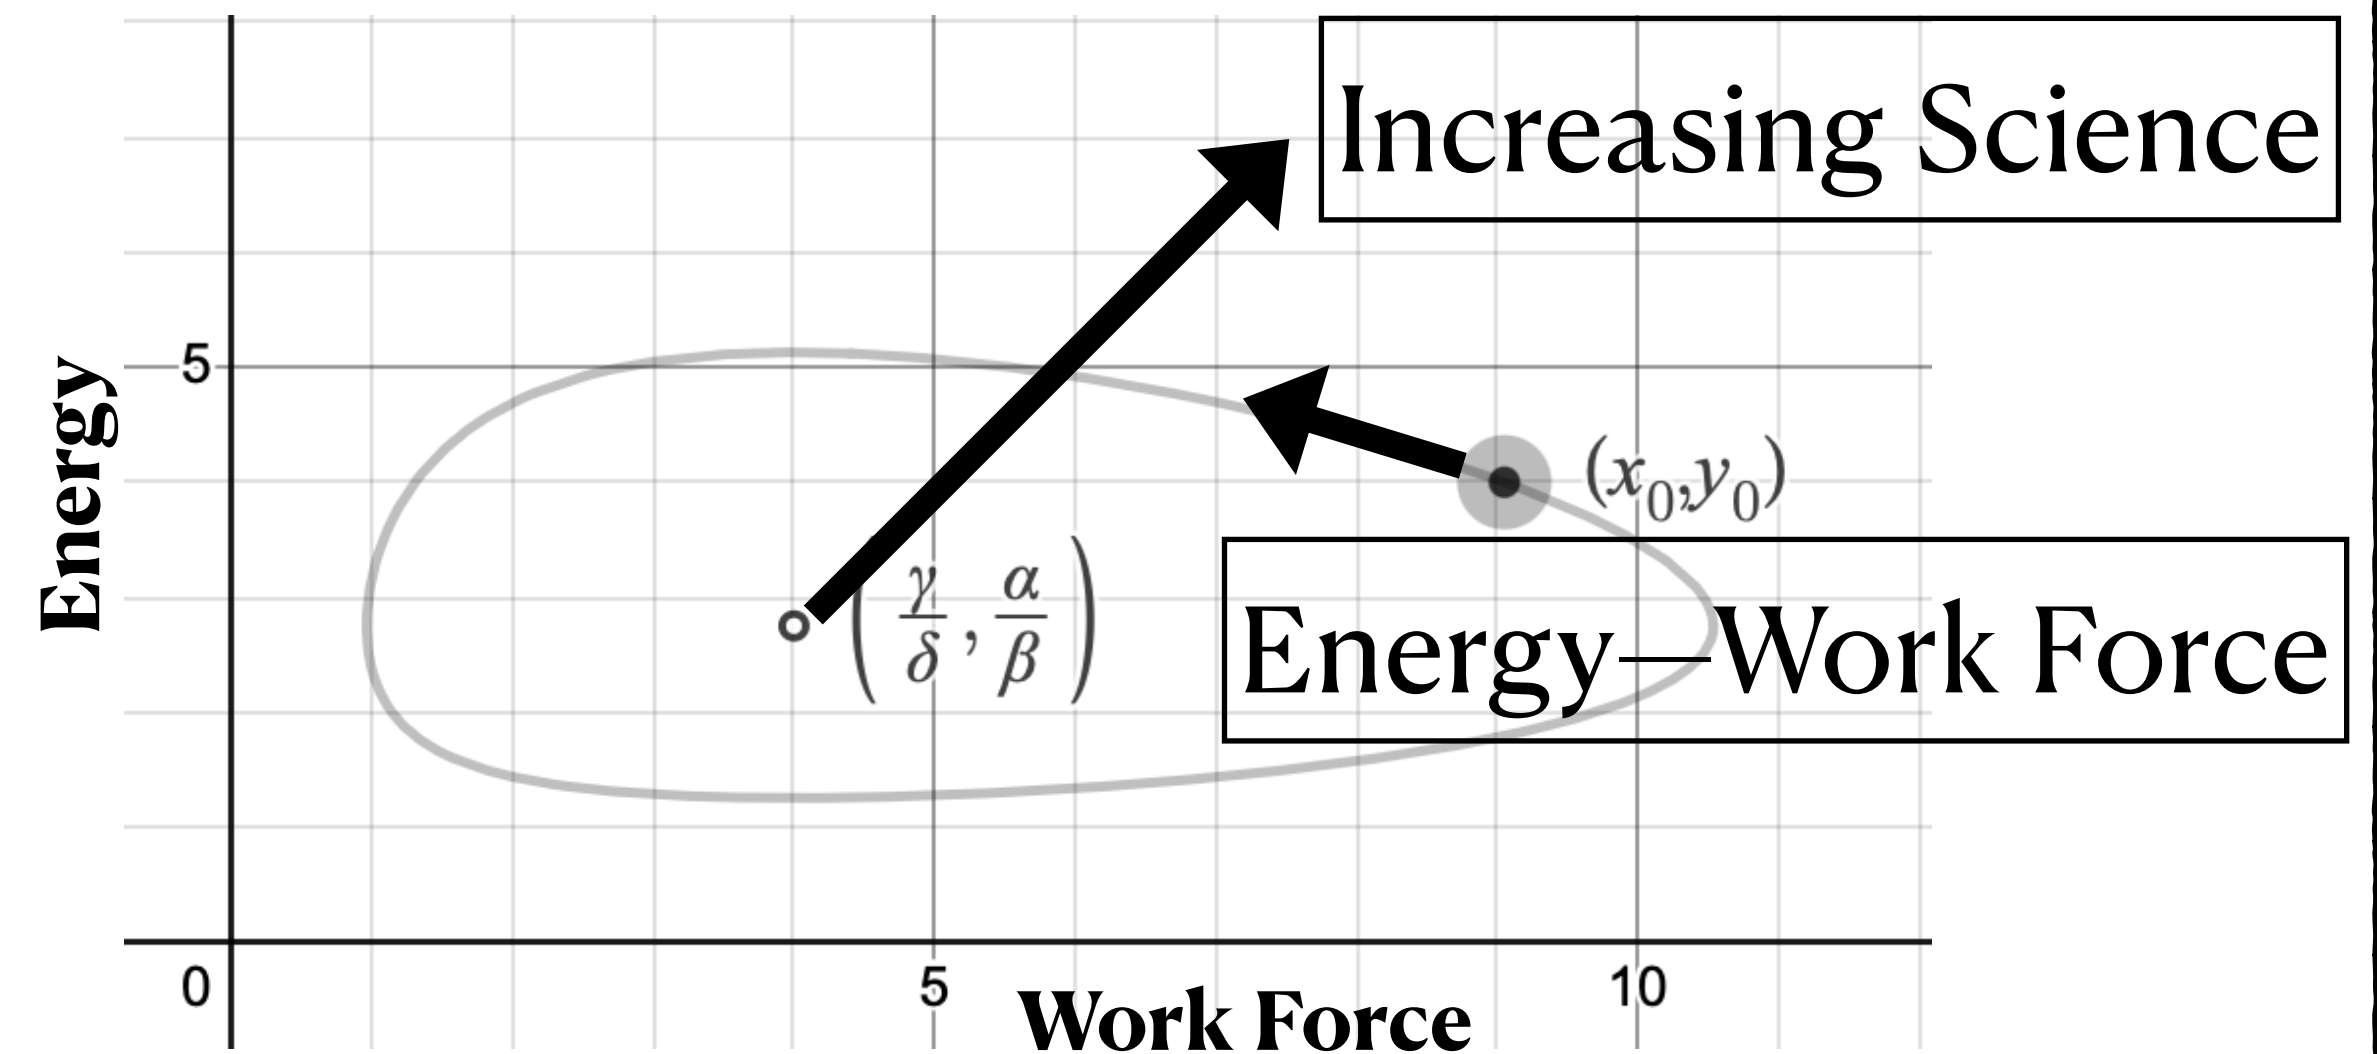

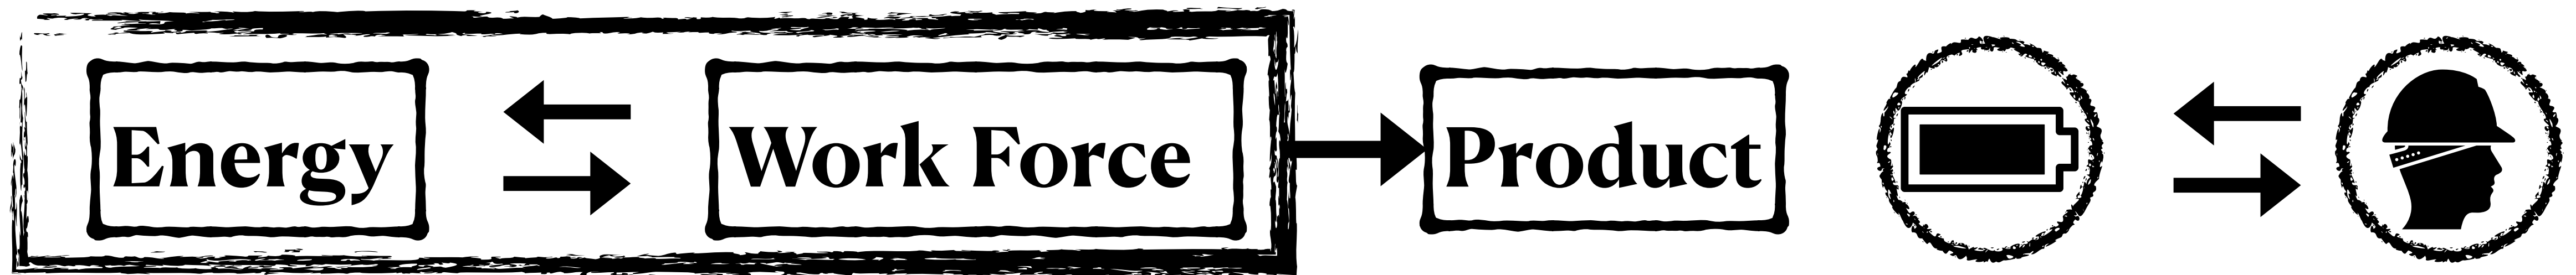

- Tier 1 Game (Graph—Slider)
- R_E : Percentage of Land for Energy
- R_w : Work Force Health Rate (Log scale!)
- R_q : Energy Quality Rate (Log scale!)

$$\frac{dE}{dt} = \frac{R_w}{R_q} SE \left(1 - \frac{E}{L}\right) - EW + nR_E L$$

$$\frac{dW}{dt} = SEW - \frac{R_w}{R_q} W + n(1 - R_E)L$$

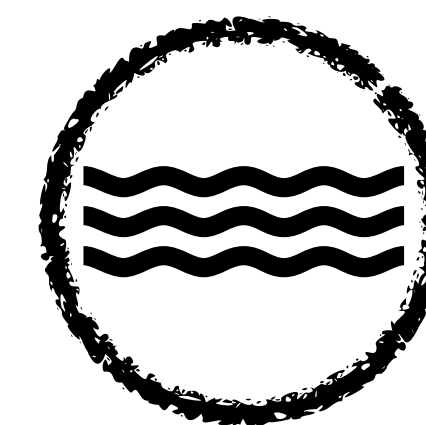

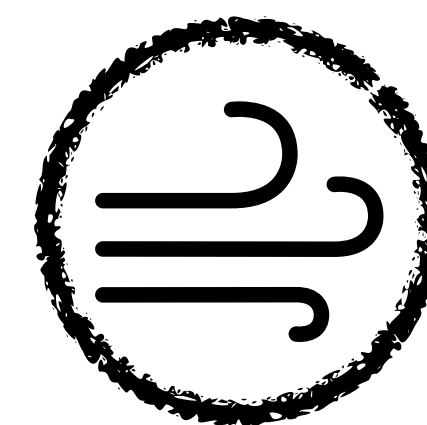

- Tier 1 Game (Graph—Slider)
- Product (P_k):
 - Extracted by Work Force (W)
 - Comes from Land (L)
 - Depends on Energy Rate (dE/dt)
 - Efficient with Science (S)
 - Constants (α) and (β) will be determined
 - Depletes with total extracted source (P_T)
 - (P_T): Resets every time new Land bought
 - Products (k): *Air, Water, Fire, Earth.*
 - Only one (1) product can be extracted at any given time (Tier 1 Sources)

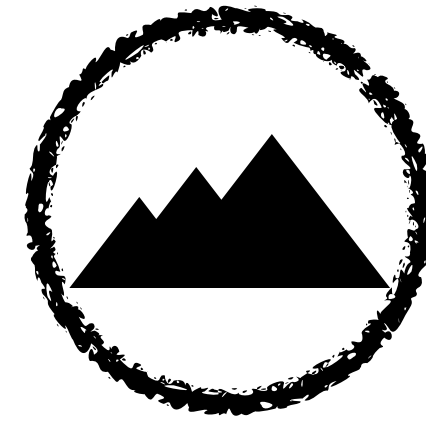

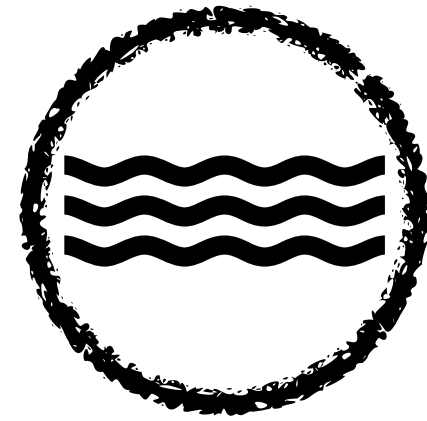

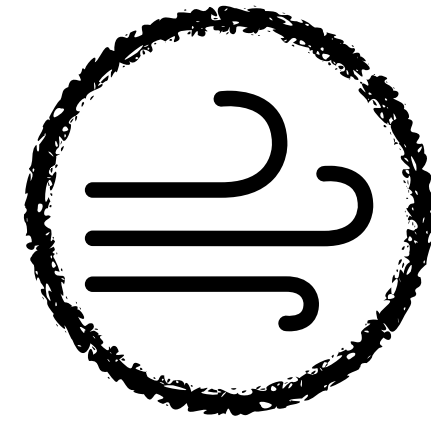

$$\frac{dE}{dt} = \frac{R_w}{R_q} SE \left(1 - \frac{E}{L}\right) - EW + nR_E L$$

$$\frac{dW}{dt} = SEW - \frac{R_w}{R_q} W + n(1 - R_E)L$$

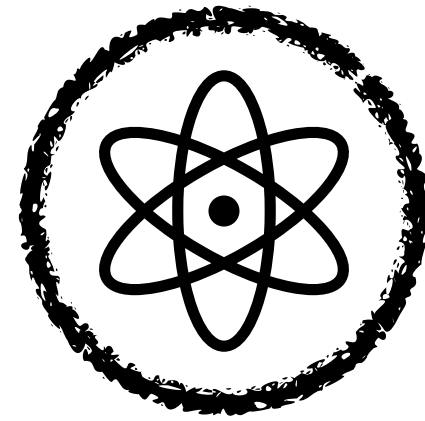

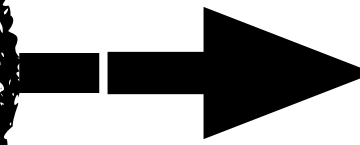

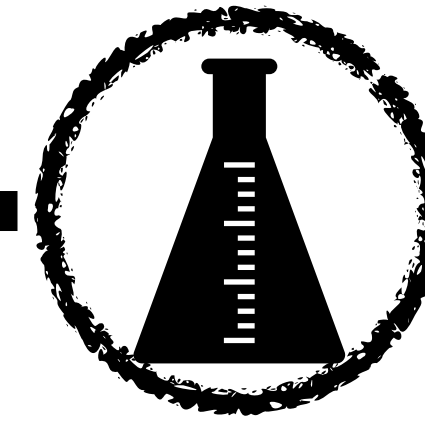

$$\frac{dP_k}{dt} = \alpha e^{-\frac{\beta}{S} P_T W S L} \frac{dE}{dt} \quad \text{(Supply)}$$

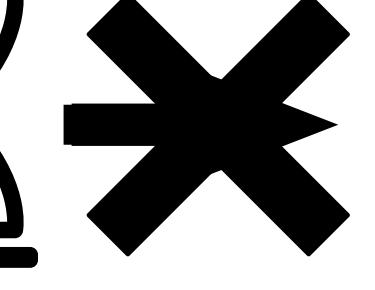

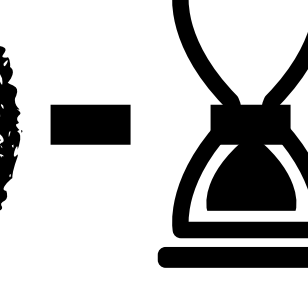

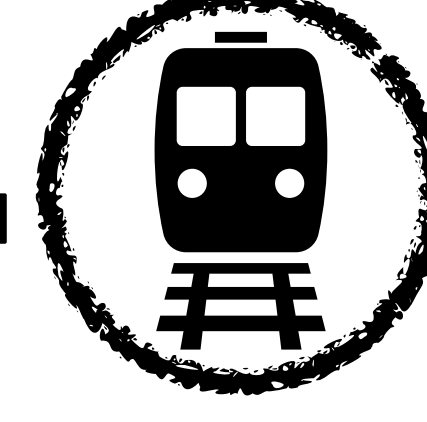

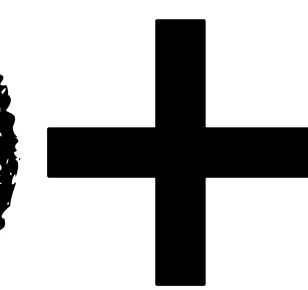

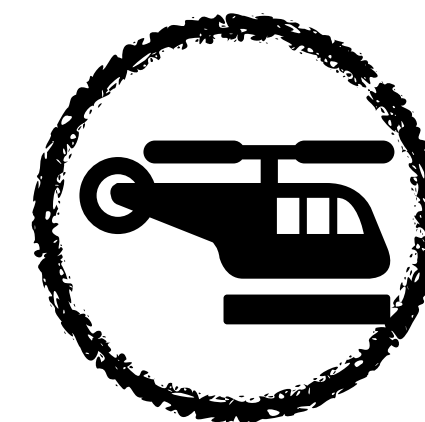

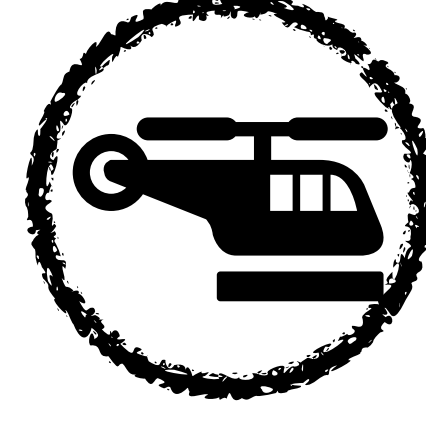

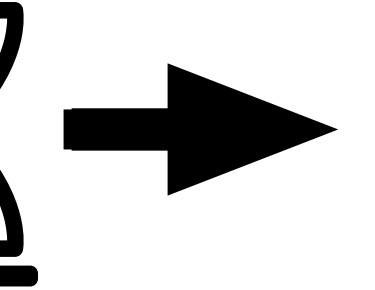

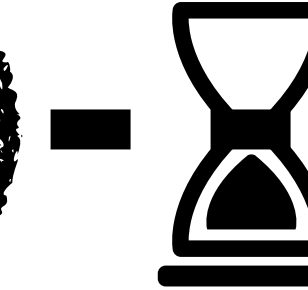

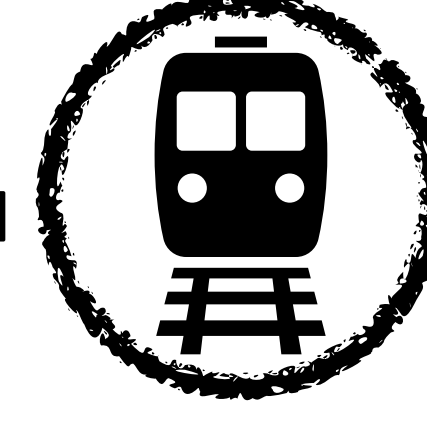

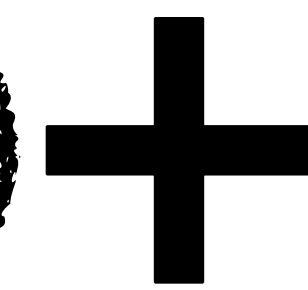

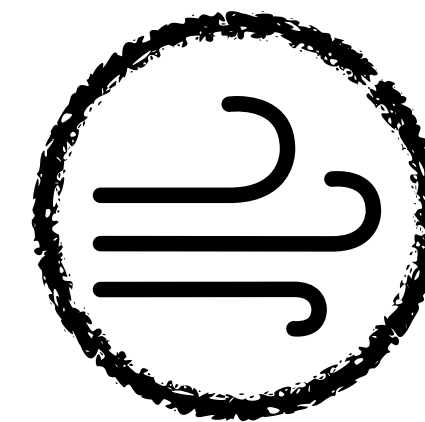

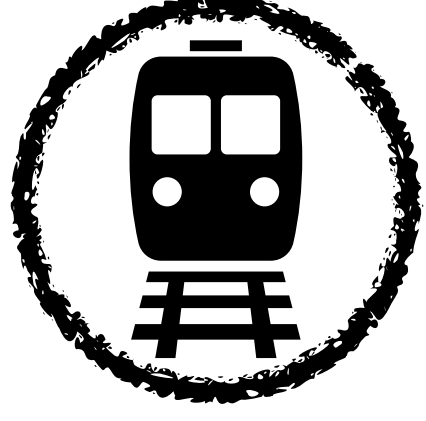

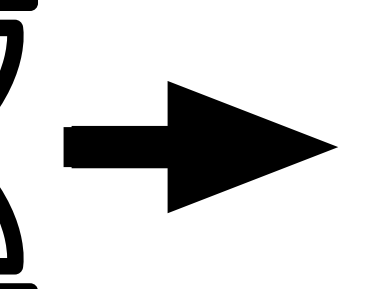

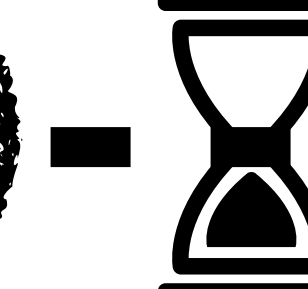

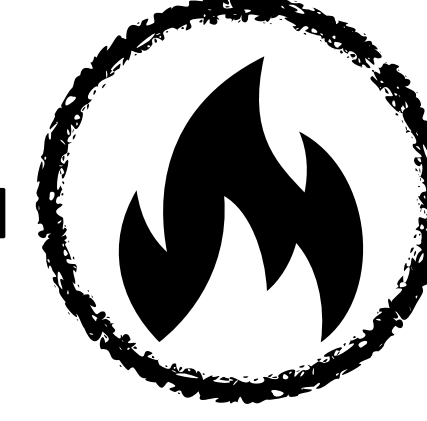

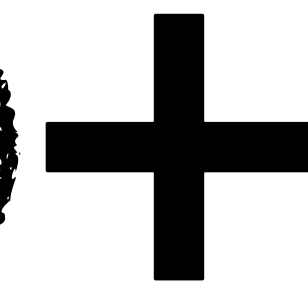

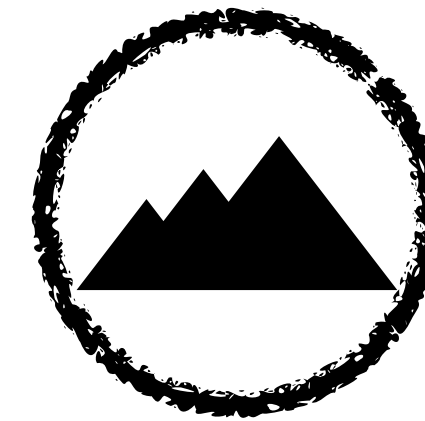

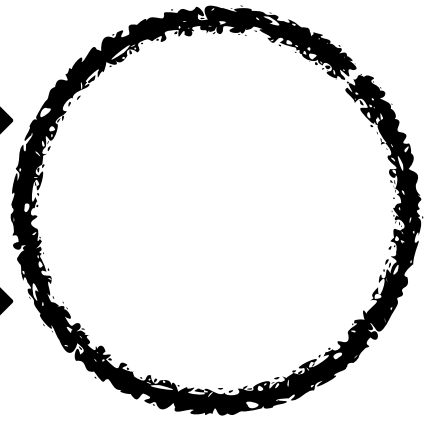

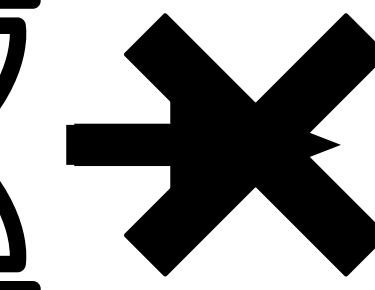

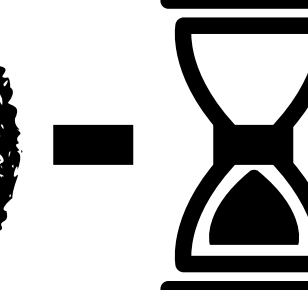

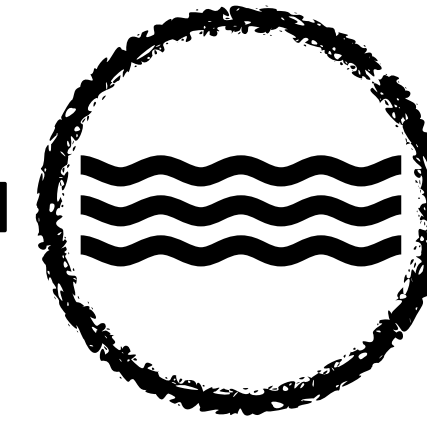

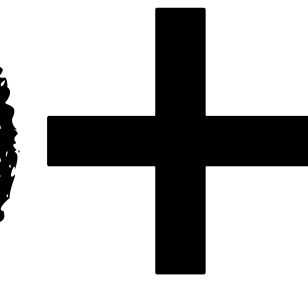

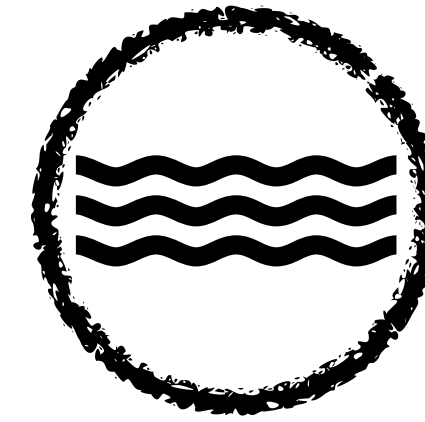

Science Points

- -

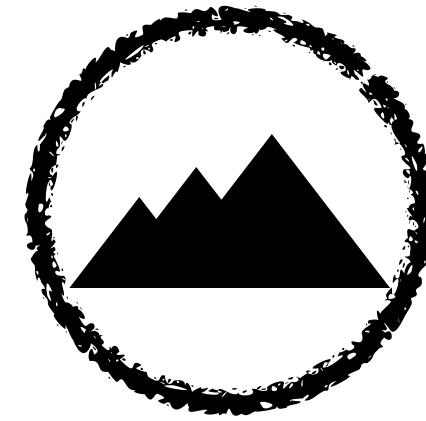

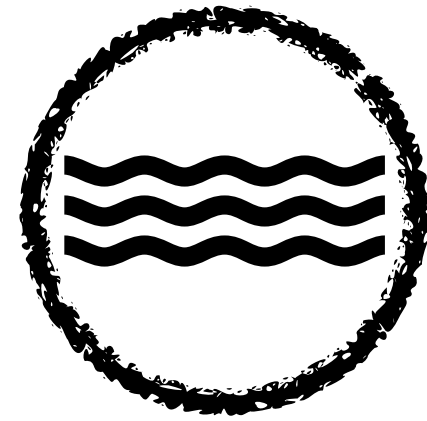

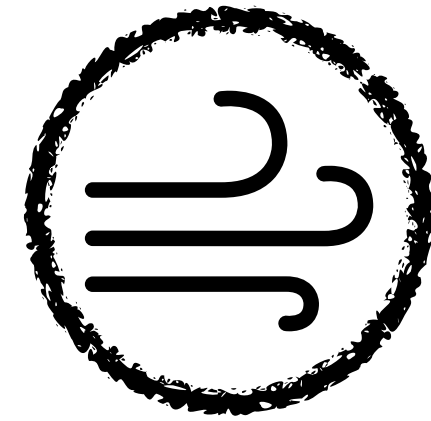

- Tier 2 Game (Alchemy)
- Combine elements to create new elements
- Starts when all Tier 1 products extracted
 - At least 100 elements each
- To create new N number of element C:
 - $N \times A + N \times B = N \times C$
 - N number of elements needed from each
- Newly produced elements can be used
 - To create further new elements
 - To sell in the Market (Tier 3 Game)

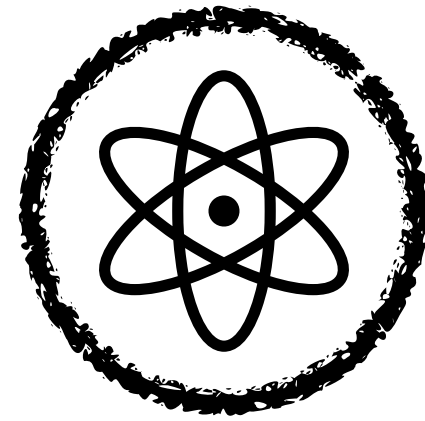

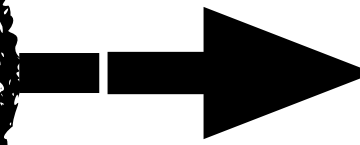

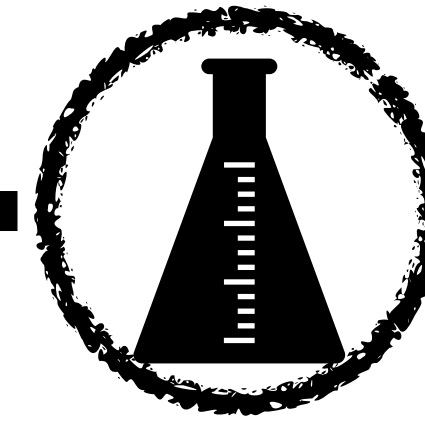

• Not All Formulas gives a new element but always takes time. *Science is hard and expensive!*

Science Points

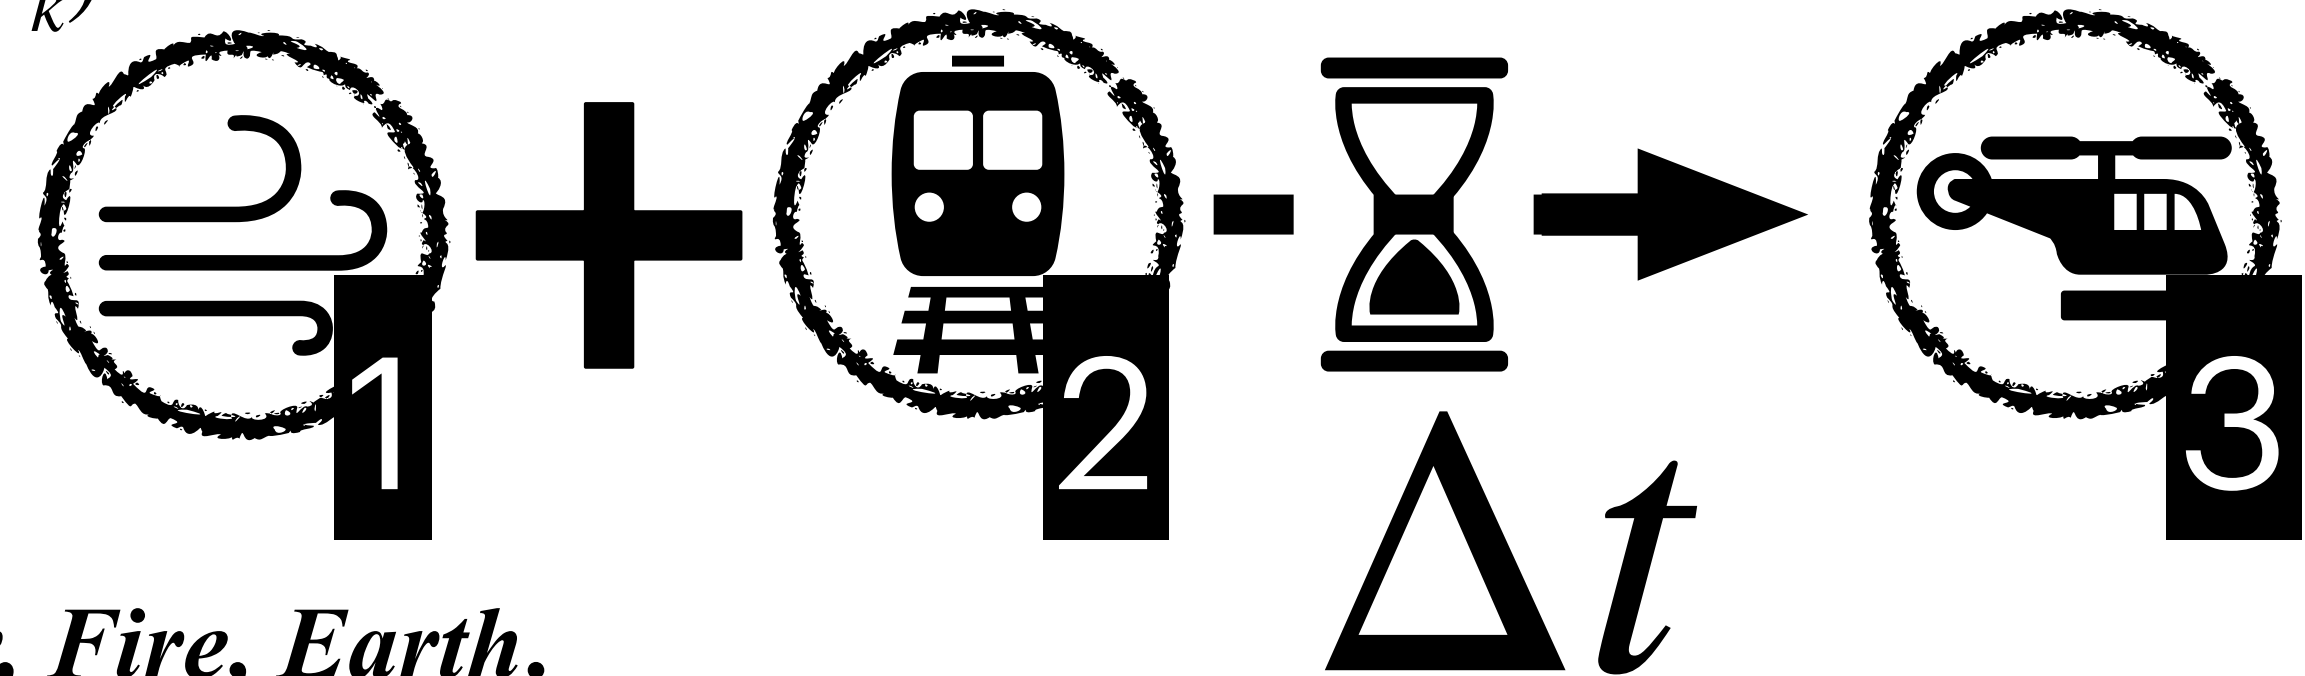

- -

- Tier 2 Game (Alchemy)
- Number of slots to produce new elements are limited by the number of Lands (L) owned

• Science (S) is calculated as: $S = 1 + \sum a_k \log_{10}(P_k)$

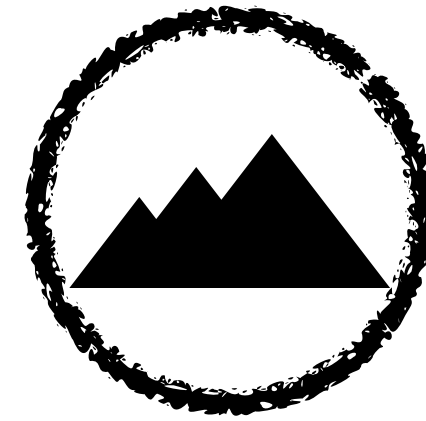

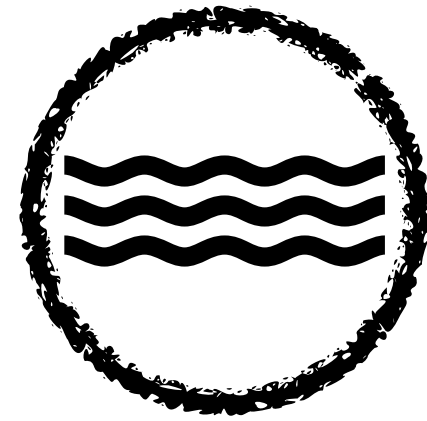

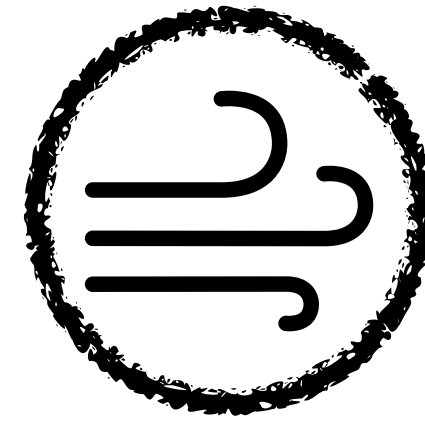

- (k) is an index for different elements
- (P_k) is the current number of element (k)
- (a_k) is the Tier Constant of elements

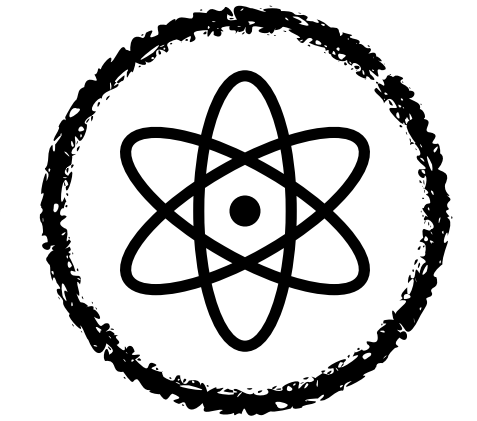

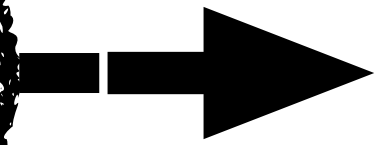

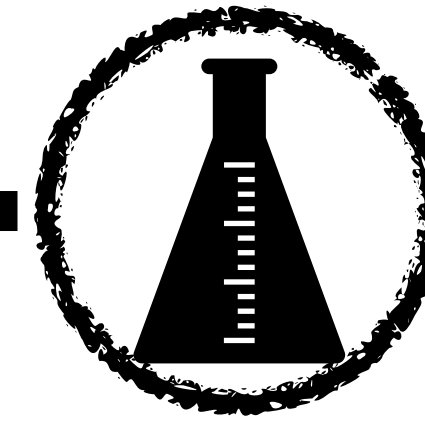

- Constant $a_1 = 1$ for Tier 1 elements: *Air, Water, Fire, Earth.*
- Constant $a_2 = 2 = a_1 + a_1$ for Tier 2 elements: First 6 elements created from Tier 1 elements
- Constant $a_3 = 3 = a_2 + a_1$ for Tier 3 elements: Tier 1 + Tier 2 elements
- Constant $a_4 = 4 = a_2 + a_2 = a_3 + a_1$ for Tier 4 elements
- Constant $a_5 = 5 = a_3 + a_2 = a_4 + a_1$ for Tier 5 elements
- Constant $a_6 = 6 = a_3 + a_3 = a_4 + a_2 = a_5 + a_1$ for Tier 6 elements ...

$$\Delta t = (a_{k1} + a_{k2})^2 \times P_k \text{seconds}$$

Science Points

- -

Tier 2 Game (Alchemy)

Number of elements in each Tier assuming every combination except self:

Tier 1: 4

Tier 2: $\binom{4}{2} = 6$

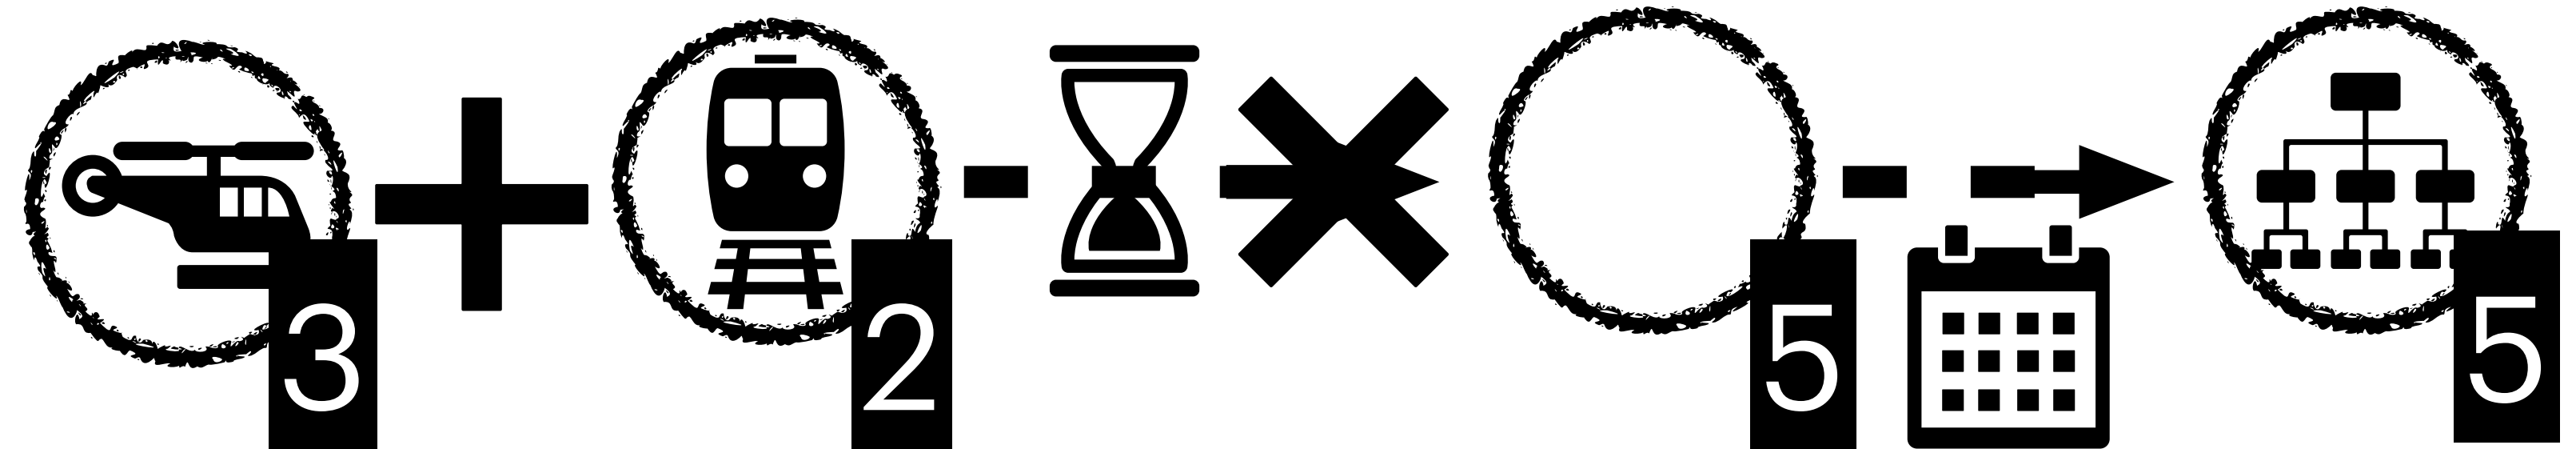

Tier 3: $6 \times 4 = 24$

Tier 4: $15 + 4 \times 24 = 111$

Tier 5: $4 \times 111 + 6 \times 24 = 588$

Tier 6: $276 + 6 \times 111 + 4 \times 588 = 3294$

A total of 4027 elements !!

Solution: Scale the game with updates every week

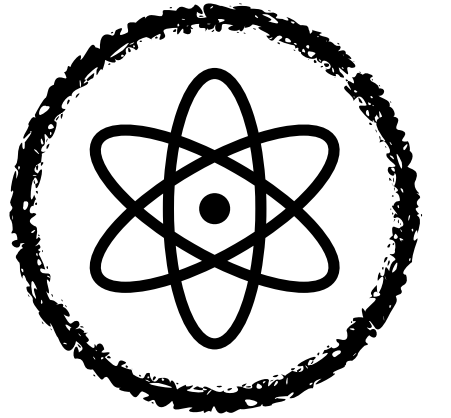

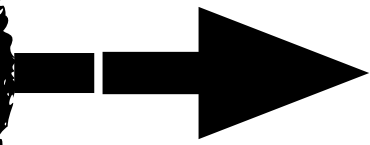

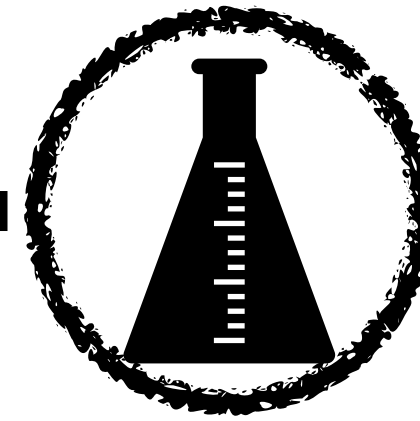

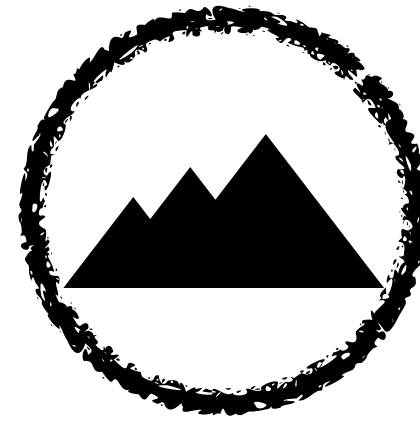

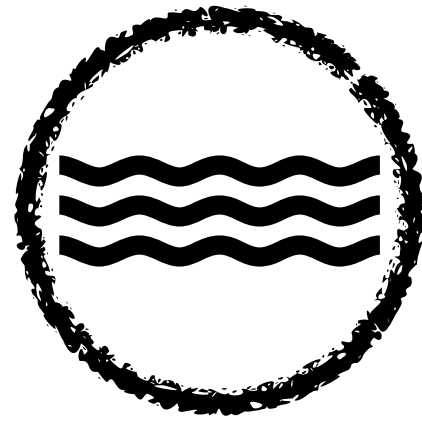

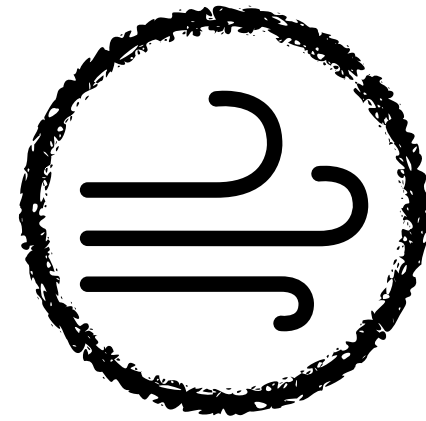

Use Social Media for new recipes

Example: @landlordalchemy

A new Tier 5 element is about to be discovered.

Any ideas for the recipe? Help the Alchemists!

Science Points

- Tier 2 Game (Alchemy)
- Game release:
 - All 30 initial elements
 - 20 elements from T4
 - 10 elements from T5
 - 2 elements from T6
- Daily: 1 Social Media element
- Weekly: 20 elements discovered
- Monthly: 4 Super element (i.e.T12)
- Annual Holidays: Special elements!
- Temporary elements from Sponsors!

23:09:14

Happy Easter!

***Special Effect: Halves the production time of Chicken!**

Amount: 1
Tier: S
Type: Holiday

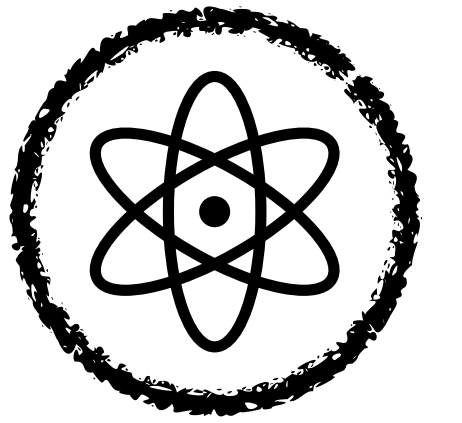

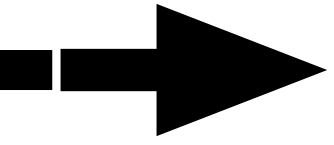

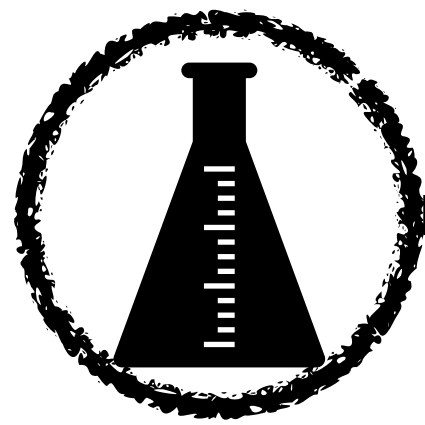

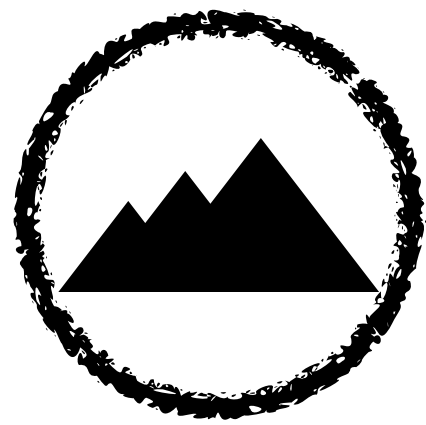

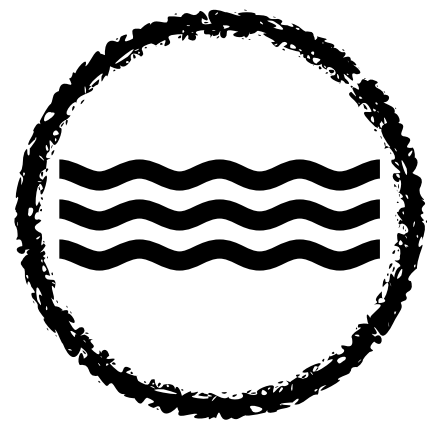

6d.15:27:18

Happy Meal!

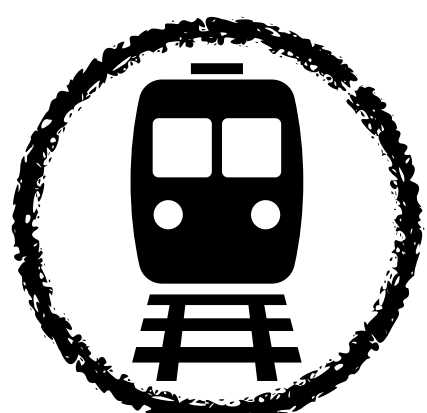

MacDonald's
***Clickable direct link to Sponsor**

***Special Effect: Faster Food!**
Tier: S
Type: Food

+

max

Produce: 1000
Time: 1 day 16 hr

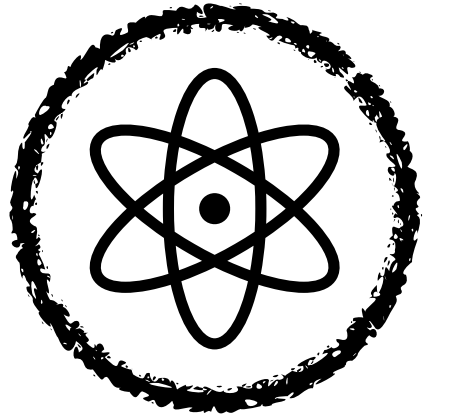

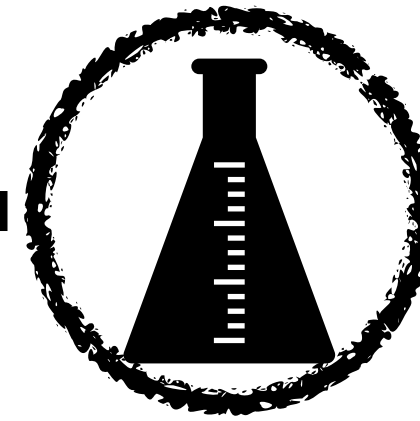

Amount: 2
Tier: 12 Type: Science

Science Points

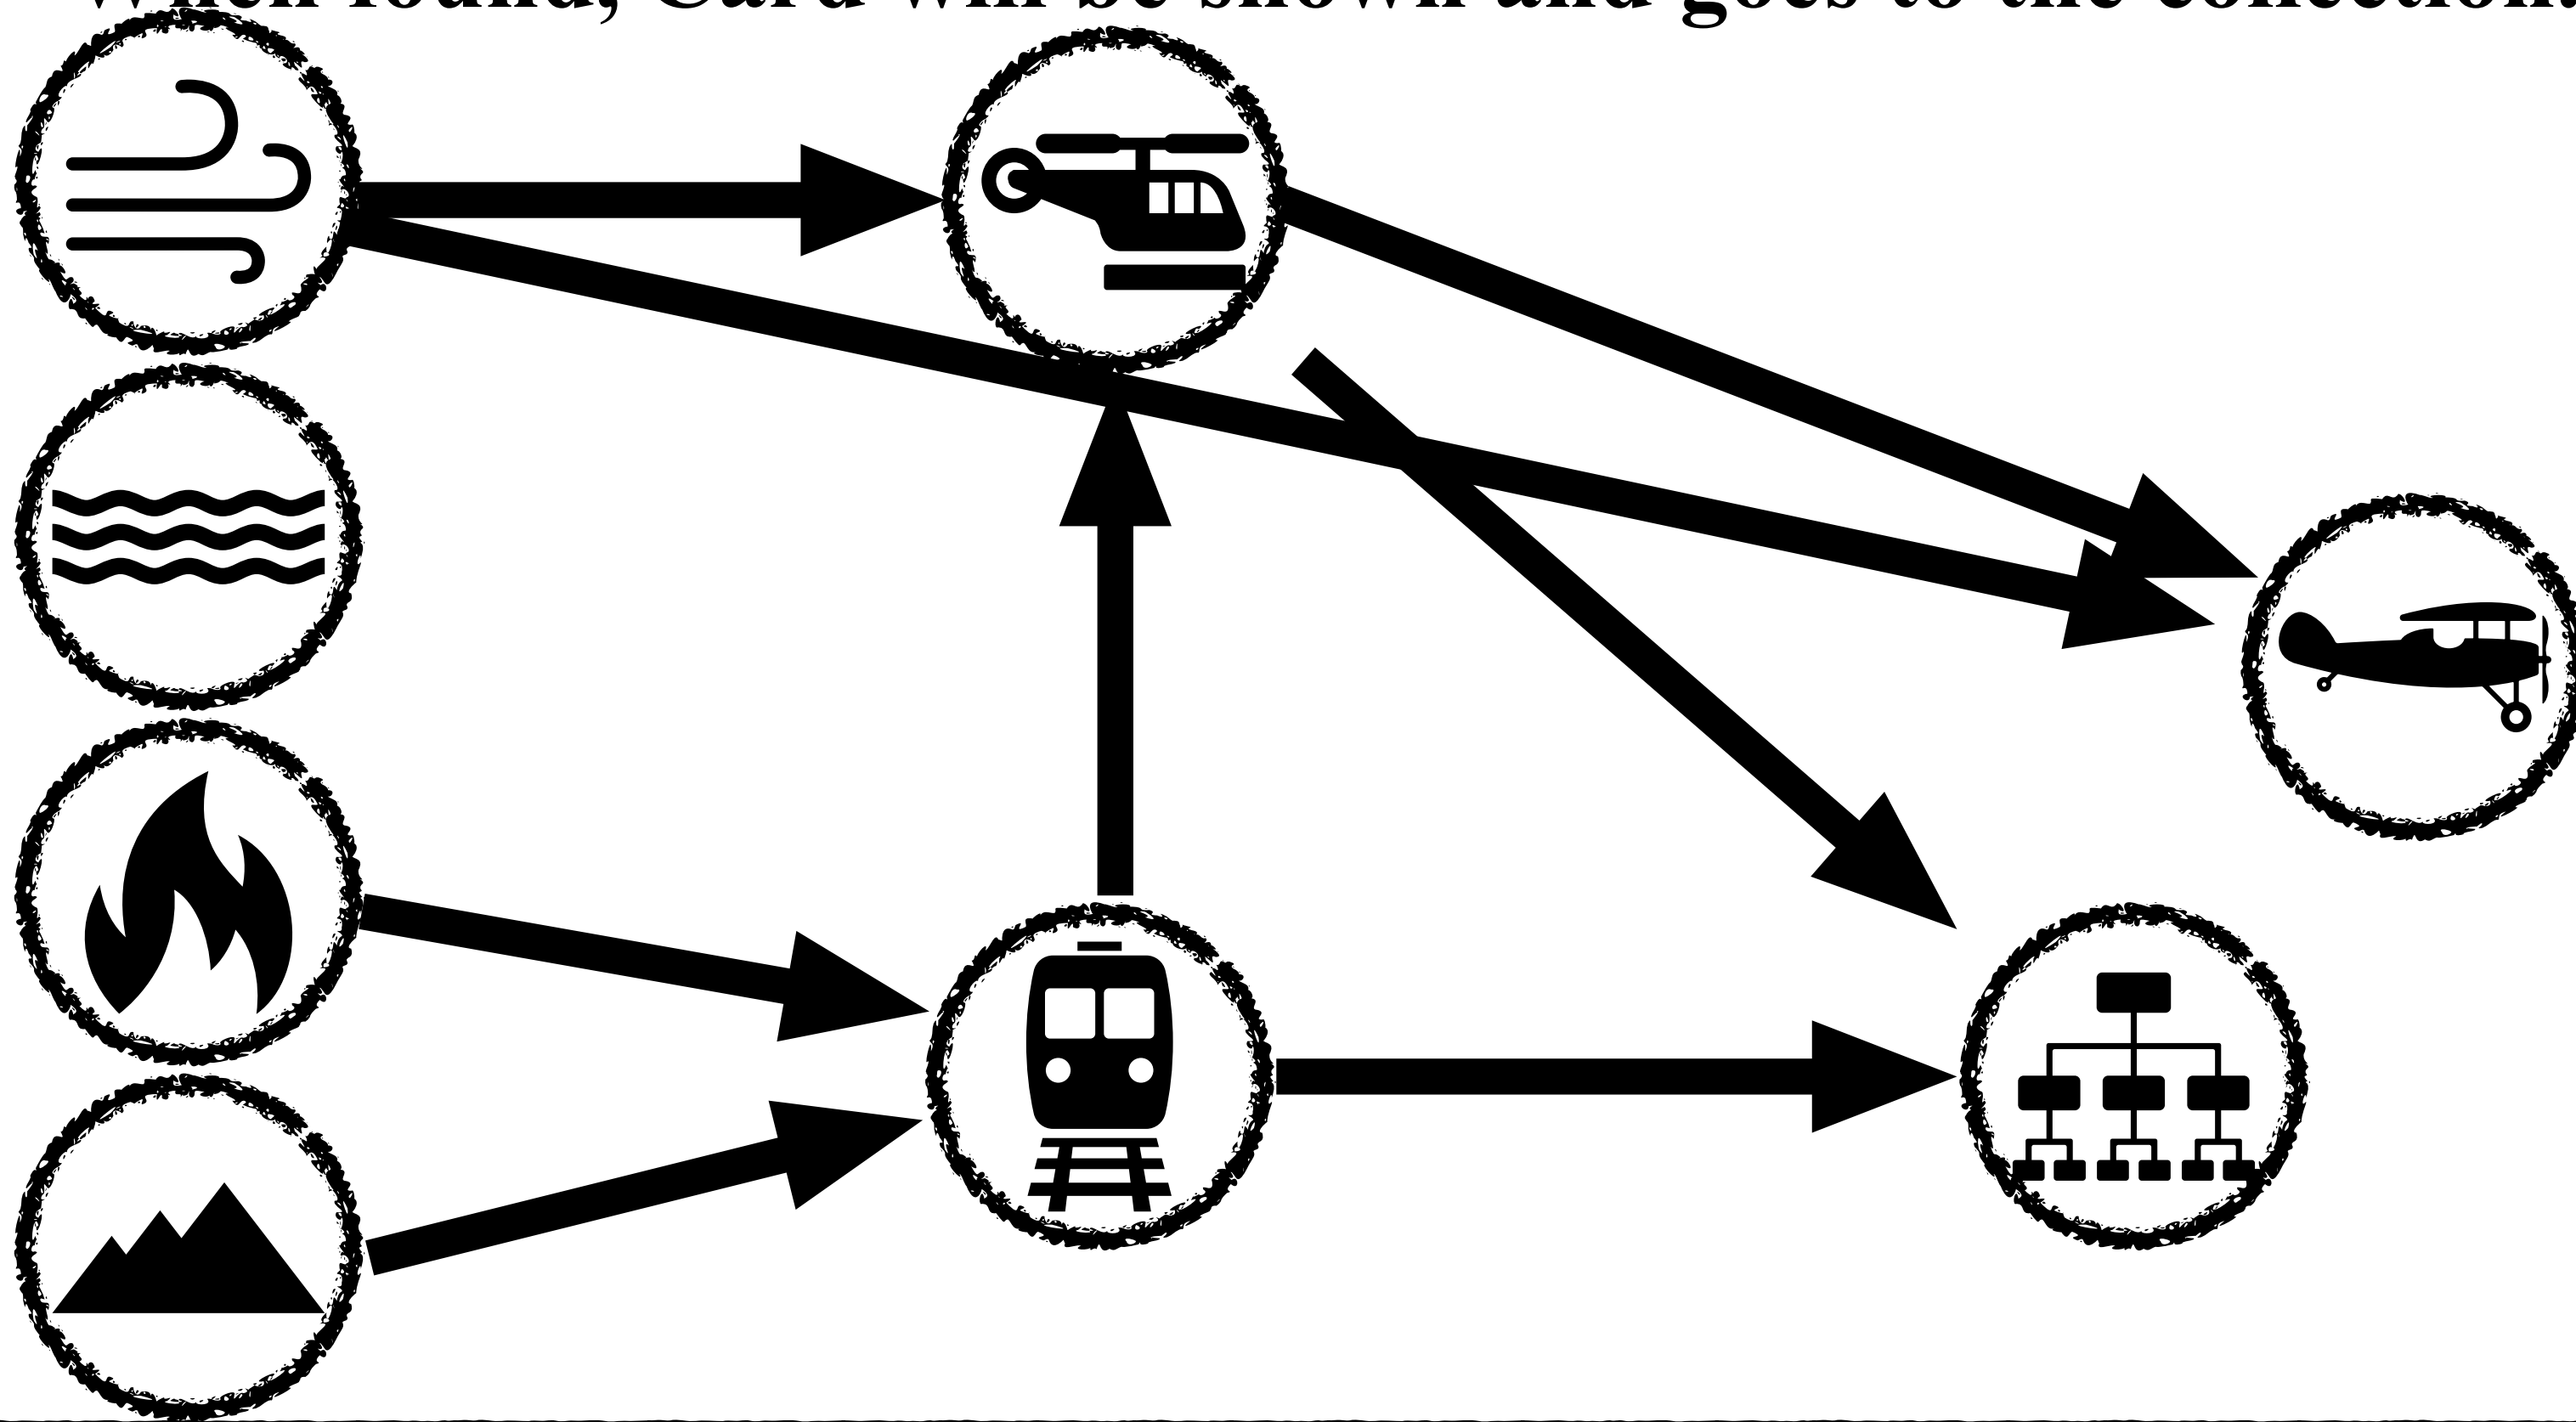

-

-

- LAB: An area in the vault to test and find new recipes.
- When found, Card will be shown and goes to the collection.

Aircraft

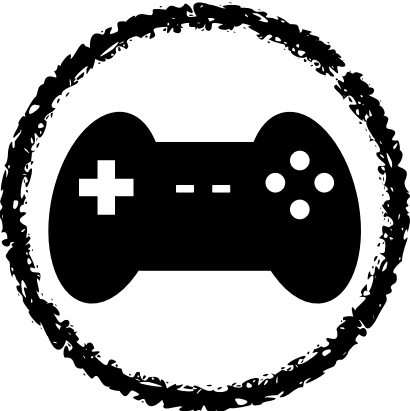

CONGRATULATIONS!

Amount: 0

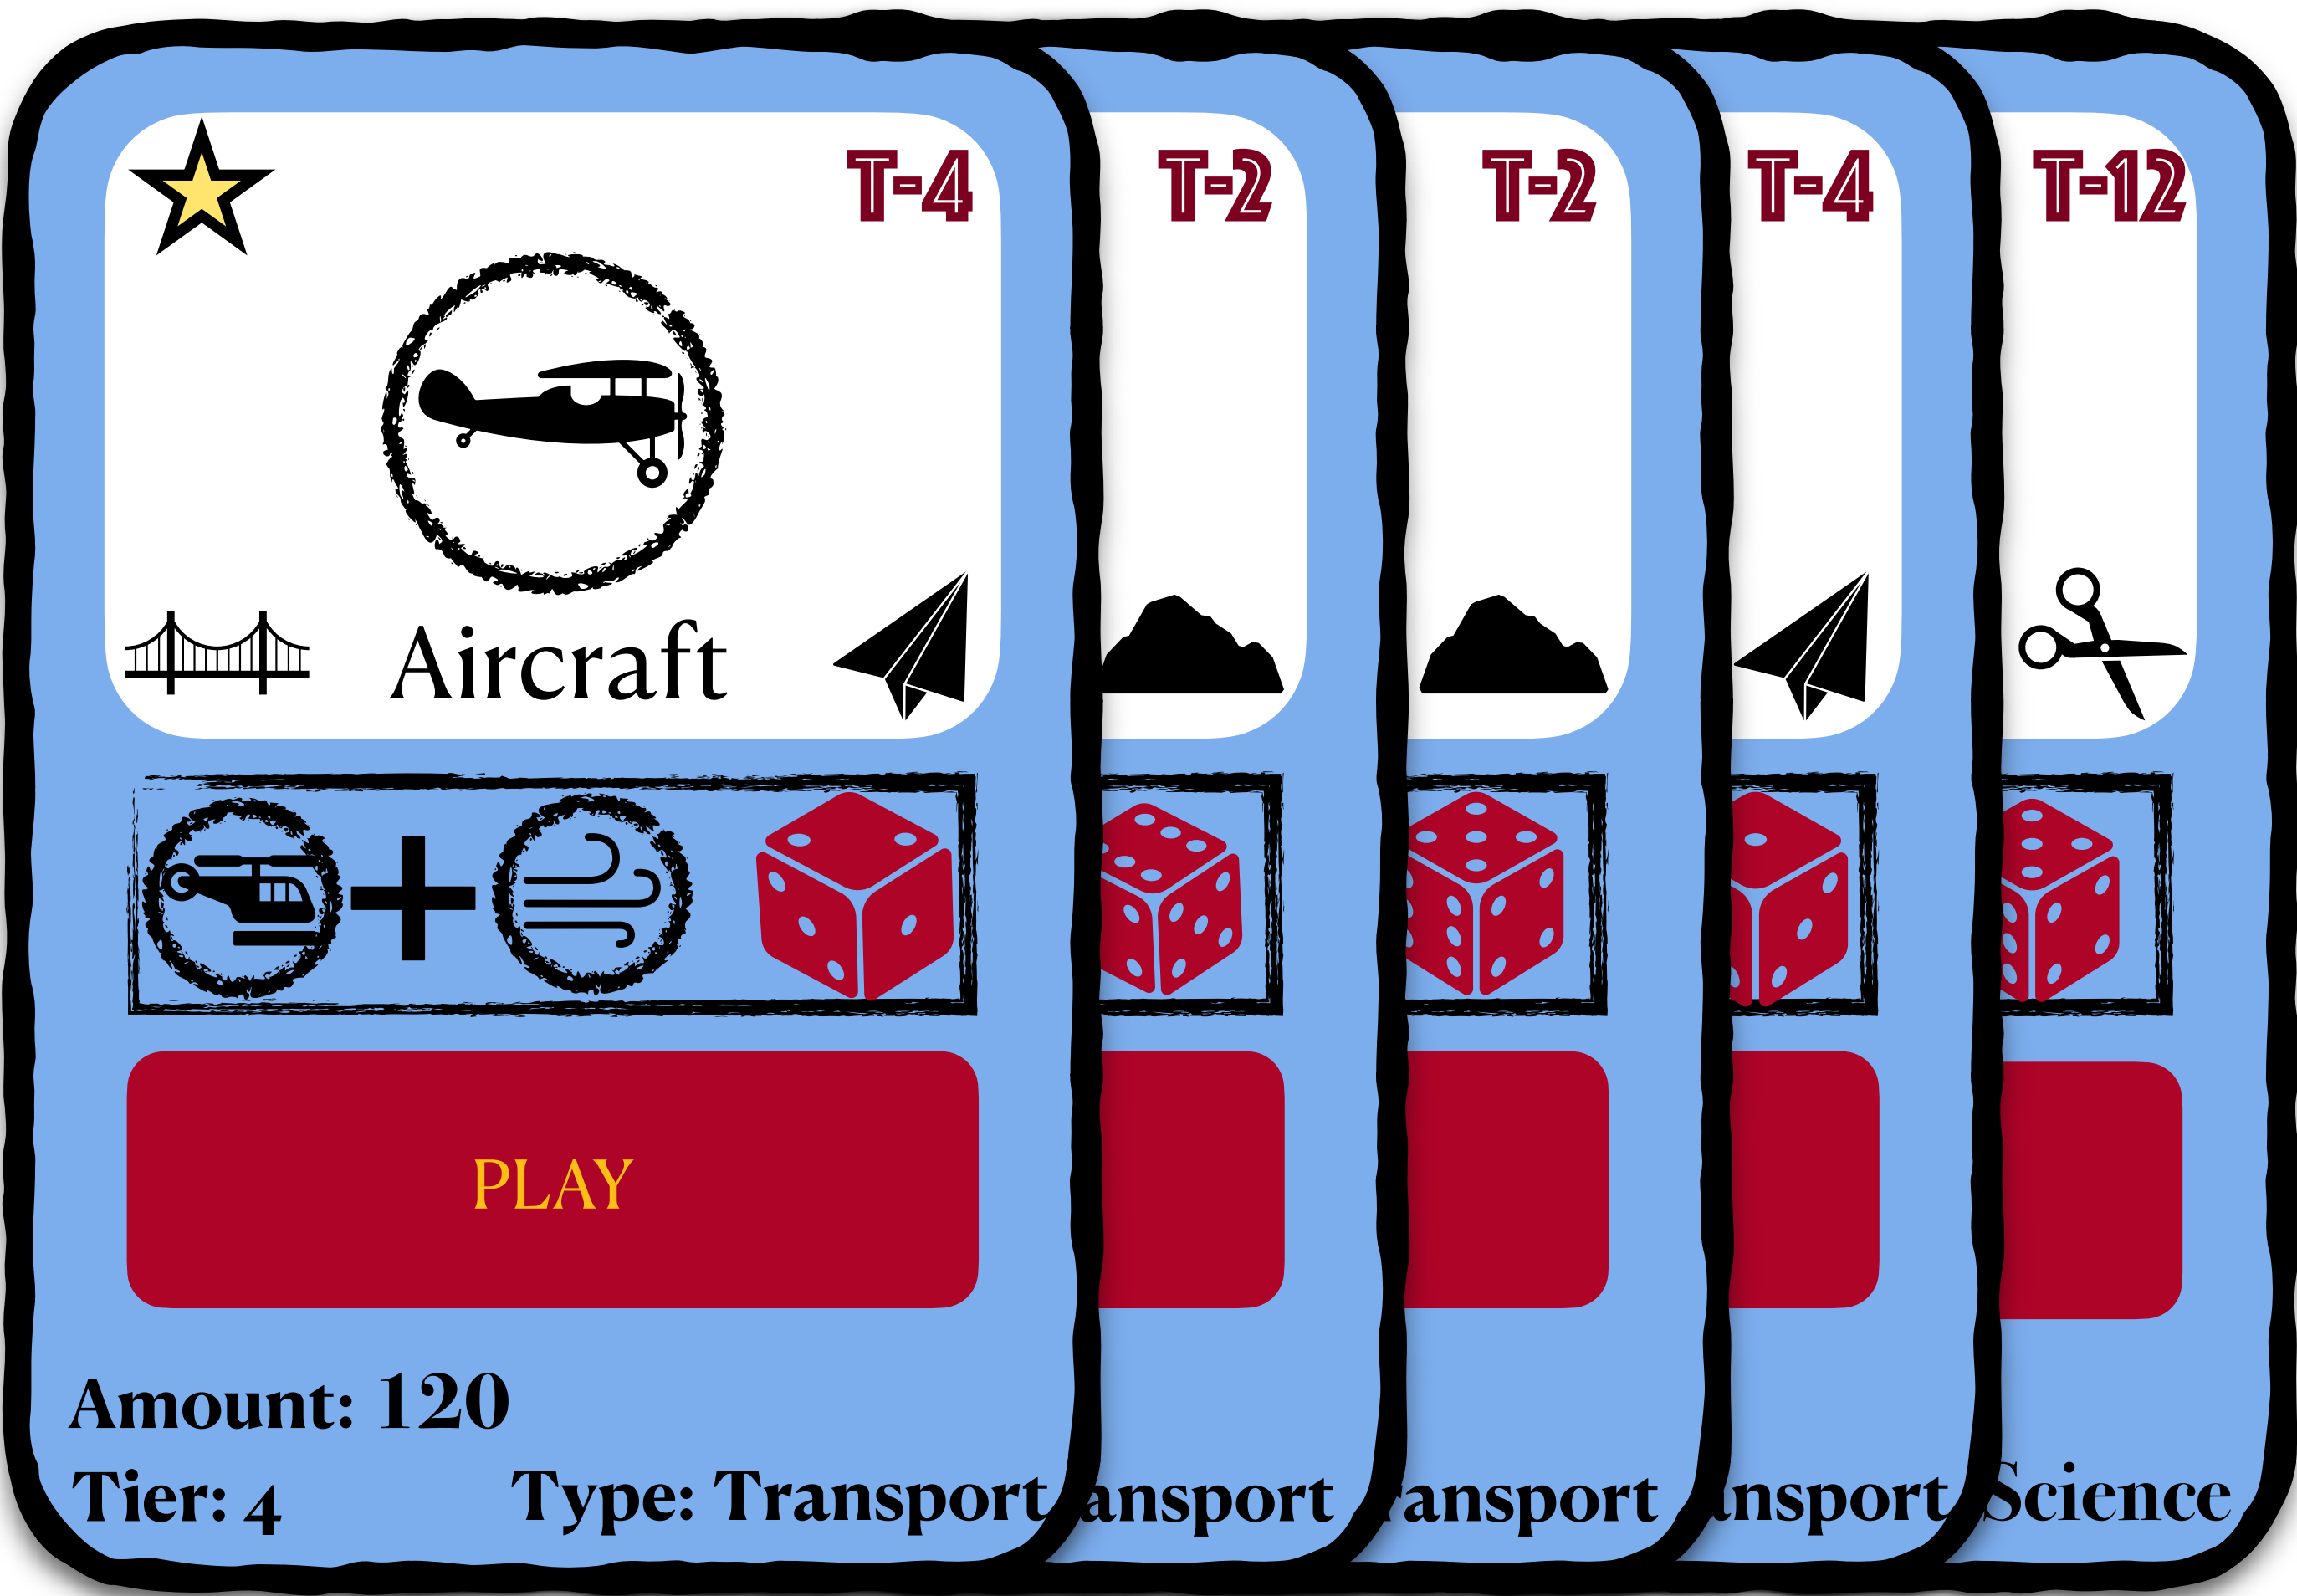

Tier: 4

Type: Transport

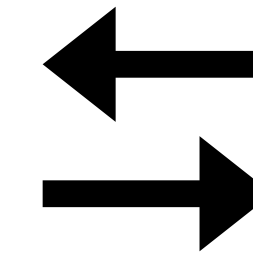

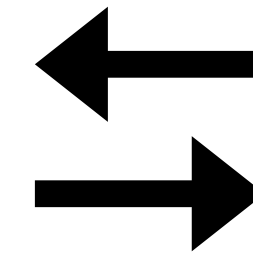

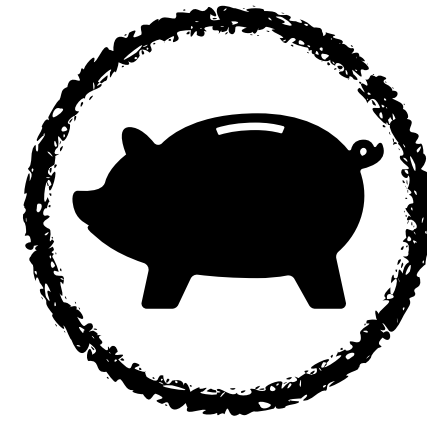

Bonus Game

- *Future Hard Copy Card Game*
- Simple competitive card game
- Choose 5 cards from your deck
- Play a card closed then open both:
 - Rock-Paper-Scissor
 - If same - Higher Tier
 - If same - Dice comparison
 - Dice until one wins
- Wins total amounts as points
- Leader Board: win Money weekly
- Chance to discover new recipes

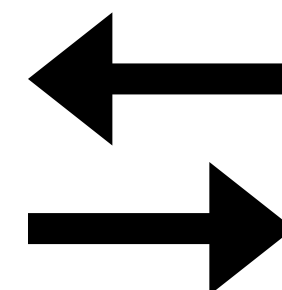

MARKET PLACE

- **Tier 3 Game (The Real Game)**
- **Some amount of any Product can be sold at any price (Free Market)**
- **Users Lends some of their Money to the Bank to enter Market Place**
- **Users Puts some of their Product to the Bank to enter Market Place**
- **Users use their assets (Products and Money) in their Bank Account for Market Place**
- **Users need to enter Market because:**
 - **Rate of Supply of Products decrease with time they demand new and more Product**
 - **Money will be needed to buy new Lands and new Land is expensive**
- **Users can withdraw their Money and Products anytime they want**
